THE SURVEILLANCE PASSPORT: RUBIO'S "CONVENIENCE" IS A BIOMETRIC DRAGNET

THE SKUNK'S SCRIPT — DECONSTRUCTED

Secretary of State Marco Antonio Rubio stood before cameras on July 3, 2026, and sold you a surveillance system wrapped in the language of convenience. Here is what he actually said — and what it actually means.

"Technological changes"

Rubio: *"We are also looking at some technological changes."*

Translation: Downplaying surveillance by rebranding it as neutral "technology." This is the same linguistic shield used for every expansion of state power — call it "modernization" so no one asks who controls the data.

"More fully able to announce"

Rubio: *"Which we'll be more fully able to announce over the coming months."*

Translation: Weasel words. He is pretending to announce something while admitting he is not actually announcing it. "More fully able" means nothing. It is verbal placeholder designed to create the impression of transparency while delivering zero substance.

"A lot easier to get a passport"

Rubio: *"Where it's going to be a lot easier to get a passport in terms of the dynamics of it."*

Translation: The pitch. Surveil you as a convenience. "Easier" means "we do the tracking for you." "Dynamics" is meaningless corporate-speak meant to sound technical and authoritative.

"Actually be able to go online"

Rubio: *"You'll actually be able to go online."*

Translation: The word "actually" is a salesman's crutch. If he had said "You'll be able to go online," it would have been a complete sentence. Adding "actually" is a classic weasel word — it implies skepticism exists and he is overcoming it. He is selling, not informing.

"Almost all of it entirely online"

Rubio: *"You'll be able to do almost all of it entirely online."*

Translation: "Almost all of it entirely" is a contradiction. Something is either entirely online or it is not. "Almost all" and "entirely" cannot coexist in honest speech. This is verbal slurry designed to sound comprehensive while committing to nothing.

"Most of the devices... they have cameras on them. I know it's shocking."

Rubio: *"Most of the devices that people are using, be it a laptop or a standing computer or what have you, where you would fill out this application, they have cameras on them. I know it's shocking."*

Translation: This is the skunk's tell. He is making light of surveillance by using "shocking" sarcastically. He wants you to laugh at the idea that cameras are everywhere — so you do not ask why the government needs to access yours. The joke is the distraction.

"They have videos that people use"

Rubio: *"But they have cameras, they have videos that people use."*

Translation: This is pure filler. "They have videos that people use" is meaningless. He is stringing words together to sound conversational while saying nothing. The cameras are not for your video calls. They are for your face.

"You should be able to take that picture on that device"

Rubio: *"You should be able to take that picture on that device as opposed to going somewhere."*

Translation: "Should" is the weasel word here. He is not saying "you will." He is saying "you should" — as if he is doing you a favor by allowing it. But no one asked for this. No one demanded the government access their webcam for passport photos. He is manufacturing a "solution" to a problem that did not exist.

"The CVS people of course hate this"

Rubio: *"Now the CVS people of course hate this and the Walgreens and all these other places."*

Translation: This is a classic sales tactic — dismiss the opposition as petty and self-interested. CVS and Walgreens are not "hating" this because they are greedy. They are "hating" it because they are being cut out of a service they provided. But Rubio frames them as petty obstructionists so you do not ask: why is the government eliminating the middleman? Because the middleman was the only thing between you and direct government biometric collection.

"Our security system"

Rubio: *"But you'll be able to take your picture from that device and be able to have it in real time through our security system."*

Translation: "Our security system" — not "the State Department's system," not "a secure government portal." "Our." This is ownership language. And "in real time" means immediate, automated, algorithmic processing. This is not a human reviewing your photo. This is a machine. And that machine is connected to a database.

"Verify the facial ID"

Rubio: *"Verify the facial ID."*

Translation: The mask slips. He is not talking about a photo. He is talking about a **facial ID** — a biometric identifier that can be stored, searched, and matched against other databases. This is not a picture. This is a digital signature of your face that never expires.

"Saves you a lot of"

Rubio: *"And it just saves you a lot of,"*

Translation: He started to say "saves you a lot of time" — the classic convenience pitch — then stopped. Why? Because he realized it is not true for everyone. For tech-savvy users, maybe. For the elderly, the poor, the rural, the disabled? No. He caught himself mid-sales-pitch and bailed.

"Little pictures... three passport pictures"

Rubio: *"You don't have to go down somewhere now and get a headshot and have the little pictures that you have to cut and then submit it, three passport pictures."*

Translation: He infantilizes the current process — "little pictures" — to make it sound antiquated and silly. He is selling you on the idea that the old way is ridiculous so the new way seems inevitable. But the old way had one advantage: it did not require you to hand your biometric data directly to a government database.

"Entirely for the most part"

Rubio: *"You'll be able to do that. You'll be able to do it online entirely for the most part with all the right numbers."*

Translation: "Entirely for the most part" is another contradiction. Something is either entire or it is not. "For the most part" is the escape hatch. And "with all the right numbers" — what numbers? Your Social

Security number? Your passport number? Your driver's license? He is being deliberately vague because the details are where the surveillance lives.

"They'll be able to verify it for you"

Rubio: *"They'll be able to verify it for you and you should be able to get it much sooner."*

Translation: "They" — not "we," not "the government," not "the Department of State." "They." The anonymous machine. The algorithm. The black box. And "should" again — the weasel word that commits to nothing.

"Customer friendly"

Rubio: *"So we're going to make it a much more customer friendly."*

Translation: This is the skunk's slip. He called you a **customer** — not a citizen, not an American, not a passport holder. A customer. He is selling you a product. The product is surveillance disguised as convenience. And customers do not have rights. Customers have receipts.

"We're not ready to do that yet, but that's really what we want to be able to do"

Rubio: *"We're not ready to do that yet, but that's really what we want to be able to do."*

Translation: This is the closest thing to honesty in the entire transcript. He is telling you: *we cannot do it yet, but we want to.* He is admitting the infrastructure is not fully built — but the intent is there. The goal is to make every passport applicant submit to facial recognition. The only thing stopping them is technical readiness, not legal or ethical restraint.

THE CONTEXT THEY ARE NOT TELLING YOU

Facial Recognition Is Already a Surveillance Tool

The State Department's passport photo requirements — neutral expression, no smiling — exist **specifically because of facial recognition technology**. Smiling changes facial geometry and makes algorithmic matching harder. The rules were not designed for human reviewers. They were designed for machines.

The U.S. government already uses passport photos to create biometric templates for identification systems. Customs and Border Protection has accessed millions of State Department passport photos without consent or notice. This program already exists. Rubio is just expanding it to the application phase.

The Database Problem

When you submit a photo for facial verification, your face becomes a **template** — a mathematical map of your facial geometry. That template can be:

- Stored indefinitely
- Searched against other databases
- Matched to surveillance footage
- Shared across agencies
- Retained even if your passport is expired

There is no "delete my biometric data" option in Rubio's announcement.

The "Security System" Is a Black Box

Rubio says facial verification will happen through "the department's security system". He does not say:

- Who built it
- Who runs it
- Where the data is stored
- How long it is retained
- Who else has access
- Whether it can be used for other purposes

The silence is the answer.

THE CAPTURE NETWORK CONNECTION

Rubio — who has received over **$1,013,563 from AIPAC** — is not an independent actor. He is a node in the same network documented throughout the Superzar Pro archive.

This passport facial recognition system will be built on infrastructure provided by the same companies that already control U.S. federal IT:

- **Axonius** (founded by Unit 8200 veterans Dean Sysman, Ofri Shur, and Avidor Bartov) — already deployed in 70+ federal agencies
- **Palantir** — already fusing SSA, HHS, and Treasury data
- **Project Nimbus** — the $1.2 billion Google/Amazon cloud contract with the Israeli military

The "security system" Rubio mentions is not a standalone passport tool. It is an integrated node in a surveillance grid that already monitors federal employees, tracks disability claims, and shares data with Israeli intelligence.

THE BOTTOM LINE

Marco Antonio Rubio is not making passports easier. He is making surveillance mandatory.

What He Said	What It Means
"Technological changes"	Surveillance expansion
"More fully able to announce"	We are not telling you everything
"Almost all of it entirely"	Weasel-word contradiction
"I know it's shocking"	Laughing at your concern
"Our security system"	Government-controlled biometric database
"Verify the facial ID"	Permanent biometric identifier
"Customer friendly"	You are a product, not a citizen
"We're not ready yet"	But we will be

The convenience is the cover. The surveillance is the point.

October 2026 activates the intensified phase. The doors are off. No softening.

Source transcript from clip:
Now, beyond that, I would say that we are also looking at some technological changes, which we'll be more fully able to announce over the coming months, where it's going to be a lot easier to get a passport in terms of the dynamics of it. You'll actually be able to go online. You'll be able to do almost all of it entirely online. One of the questions we had was most of the devices that people are using, be it a laptop or a standing computer or what have you, where you would fill out this application, they have cameras on them. I know it's shocking. but they have cameras, they have videos that people use. You should be able to take that picture on that device as opposed to going somewhere. Now the CVS people of course hate this and the Walgreens and all these other places, but you'll be able to take your picture from that device and be able to have it in real time through our security system, verify the facial ID. And it just saves you a lot of, you don't have to go down somewhere now and get a headshot and have the little pictures that you have to cut and then submit it, three passport pictures.

You'll be able to do that. You'll be able to do it online entirely for the most part with all the right numbers. They'll be able to verify it for you and you should be able to get it much sooner. So we're going to make it a much more customer friendly. We're not ready to do that yet, but that's really what we want to be able to do.
